## ChemOil Logistics AG.

ChemOil Logistics AG is your partner for pan-European rail freight forwarding and logistics, particularly in the chemical and petrochemical sector. As a subsidiary of SBB Cargo, we were set up to meet the stringent requirements applied to the transport of dangerous goods. In this specialized freight segment, maximum reliability and a high level of expertise are absolutely vital.

We are Switzerland's largest provider of customized end-to-end solutions for rail transport of hazardous goods. Transporting over 10 million tonnes of cargo per year, we have thorough hands-on know-how and a highly efficient network. We are proud to work for a large number of well-known companies who place their trust in our effective, flexible and safe transport solutions.

## ChemLink.

The reliable wagon group solution.

ChemLink is our own international system for the haulage of wagon groups. Within ChemLink we offer regular, reliable rail connections between selected chemical industry centres, ranging from Belgium and Germany via Switzerland to Italy. In each chemical centre, we work with carefully selected subcontractors / railway undertakings to arrange the last-mile deliveries.

## Block trains.

Most efficient for large volumes.

With our extensive knowledge of the rail market, we provide our customers with tailor-made solutions. We take care of the end-to-end cross-border coordination of your trains and always look for the best solution to meet your specific requirements.

## Fleet management.

Wagon service included.

Besides hauling rail wagons, we also supply customers with wagons, which they can rent either through ChemOil Logistics AG or independently. We provide advice on the appropriate choice of wagons for the transportation of specific products. Monitoring our customers' wagon fleets, including maintenance and repair of damaged wagons, is also an important part of our service. You can focus on your core business while we take care of your fleet.

## Supply chain solutions.

Even beyond rail.

The use of rail alone does not always meet all requirements. Therefore, our product portfolio includes door-to-door freight solutions involving other transport modes, such as barge, tank, container or truck. The storage of (petro)chemical products is also a service we offer our customers.

Value-added services such as planning, supply control, tracking and tracing of your wagonloads, and EDI connections in combination with our core products make ChemOil Logistics AG the go-to address for all your rail-related transport needs.
